CSE110 Review Questions (Solutions)

Prepared by Ryan Dougherty

1 Methods

Question 1 Write a boolean method called allDifferent that takes 3 int numbers and returns true if the numbers are all different and false otherwise.
Answer:

```java
public boolean allDifferent(int num1, int num2, int num3) {
        if (num1 != num2 && num1 != num3 && num2 != num3) {
                return true;
        } else {
                return false;
        }
}
```
